Backups Using The "at" Command

I would like to run an automated backup every night at a specified time. I have seen here on this newsgroup where one can set up an automated backup using the backup program and the "at" command. Can
someone please post how to do this?

Thanks,

What we do is, we have a .bat file that has a whole bunch of nightly processing that we schedule to run at 1:00am every Tuesday-Saturday.

For the backup, our command line is:

REM Perform the backup
ntbackup backup %BACKUPSET% /v /d "Nightly Backup" /hc:on /l "c:\logs\backup.1" /tape:0 > c:\logs\ntbackup.log

REM Eject the tape
ntbackup eject /tape:0

This does our backup, then ejects the tape when the backup is finished. We
used the at command to schedule this process as follows:

AT 1:00 /interactive
/every:Tuesday,Wednesday,Thursday,Friday,Saturday
c:\bat\autonite.bat

This runs our autonite.bat file every Tuesday - Saturday morning at 1:00am.
